Admonter Natural Floor on under-floor-heating-system

Admonter Natural Floors are ideally suited for under-floor heating systems. We recommend hot-water underfloor heating systems set at low temperature. The surface temperature of 29°C must not be exceeded.

The only exception is Beech. We suggest that our products ideally are fully glued down for best results with Admonter elastic adhesive. However, like all engineered boards our planks can be laid as a floating installation (except 2-layer floors and 3-layer floors small (SF-RS), they have to be fully glued down).
